

Name/Model: AVC Edge

Vendor: Sequoia Voting Systems, Inc.

How To Vote On This Machine:

1. When the voter enters the precinct, he or she is given a "smart-card" by a poll worker after confirming the voter is registered.
2. The voter then takes the smart-card to a voting machine and inserts the smart-card into the yellow slot visible in the middle picture above.
3. A language selection screen is presented to the voter.
4. Voter follow on-screen instructions.
5. The AVC Edge may also be equipped in some precincts to print a voter-verified paper audit trail using the VeriVote printer. In this case, the voter will inspect the printout, which is displayed under glass. If the paper accurately reflects the vote, the voter indicates so using the touchscreen and casts the vote; the printed paper is withdrawn into the machine to protect privacy. If the paper is incorrect, the voter may mark it as spoiled and change his or her vote using the touchscreen interface. After the vote is cast, the smart-card pops out of the machine and the voter returns it to a poll worker.

REMEMBER: You have the right to ask for assistance from a poll work during the voting process. If the poll worker is unable to resolve any machine-related problem you might have, **do not cast your ballot on the machine**. You can demand to vote on another machine or by paper.
